Executive Summary

La Lumière Effacée was created as a sound-first bilingual album system, not a traditional collection of songs.

The core method is simple:

English gives the structure. French gives the feeling. Meaning is negotiated, not preserved.

Instead of translating lyrics literally, the process recomposes them so they sing naturally. English appears as truth, fracture, hook, or declaration. French carries atmosphere, emotion, vowel flow, and intimacy.

The album was built from recurring musical and lyrical DNA: light, memory, erasure, survival, fractured identity, and the tension between human expression and machine reconstruction. Songs were shaped as transformed states of one world rather than separate genre exercises.

Generative tools like Suno were used to discover performances, textures, extensions, and alternate states, but the final method depends on human selection, arrangement, repair, sequencing, and restraint.

The guiding question became:

What state of the system are we in now?

That question turned the album into a cohesive emotional arc: a world waking, becoming bright, destabilizing, narrowing into aftermath, and finally fading into memory.

1. Core Creative Premise

The method we developed for *La Lumière Effacée* is not a conventional songwriting workflow. It is a **sound-first, system-driven composition method** designed for French/English hybrid songs created with generative music tools, then refined through human selection, editing, arrangement, and conceptual sequencing.

The central rule is:

English defines structure. French defines feeling. Meaning is negotiated, not preserved.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

That became the foundation of the entire project. We stopped treating French as a translation layer and started treating it as a **phonetic/emotional instrument**. The English lyric provides clarity, impact, fracture, or conceptual truth. The French lyric provides vowel flow, atmosphere, emotional body, and musicality. The framework explicitly rejects literal translation in favor of re-composition across languages.

The project's real breakthrough was realizing that the album should not be built as a collection of unrelated songs. It should be built as a **system of related states**: songs that share DNA, recur as altered versions of one another, degrade, brighten, collapse, or reappear in changed form.

In other words:

We did not write ten separate songs. We designed a musical world and generated multiple states of that world.

2. Sound Before Literal Meaning

The first methodological principle was to privilege sound over strict semantic accuracy.

When an English phrase was moved into French, the goal was not to preserve every literal meaning. The goal was to preserve:

- emotional intent
- cadence
- rhyme energy
- singability
- vowel shape
- dramatic function
- relationship to the album's recurring motifs

If literal meaning fought the sound, literal meaning was allowed to yield.

This led to the “pressure release” rule: when a French line does not rhyme cleanly or sing naturally, the meaning must be altered until the line works musically. The framework keeps guardrails around this drift: the emotional alignment must survive, at least one anchor image or

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

idea must remain, the rhyme family must be respected, and the drift must feel intentional rather than random.

That principle explains why the French lines often became more compact, more symbolic, or more album-specific than the English source. We were not asking, “What is the exact French translation?” We were asking:

What French line would this song have written if it had been born in French?

3. English As Blueprint, French As Realization

The workflow generally followed three steps.

First, the English material supplied the **structural blueprint**. It gave us the emotional scene, the rhyme family, the dramatic shape, and often the hook logic.

Second, we extracted the working mechanics: rhyme scheme, phrase length, cadence, vowel targets, repeated sounds, and conceptual anchor points.

Third, the French version was recomposed to preserve the song’s shape and sound behavior rather than its literal wording. Internal rhyme, vowel continuity, and phrase-level singability were prioritized.

This is why the work often improved when we stopped asking for “translation” and started asking for “French recomposition.” Translation produced lines that were correct but stiff. Recomposition produced lines that belonged to the record.

4. The ABABA / Return-With-Drift Principle

A key structural tool was the **ABABA pattern**.

The preferred pattern was:

A – A – B – A – A'

The A lines create ritual, memory, repetition, or emotional fixation. The B line interrupts the ritual. The final A' returns to the original pattern, but changed. It is not simple repetition. It is reinterpretation.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

This became important because the album is about states that repeat but do not remain stable. A phrase can come back, but by the time it returns, the listener no longer hears it the same way.

That method also gave the songs a generative advantage. Suno often responds well to short, repeated, structurally clear phrases. But the human method was to make repetition carry dramatic pressure instead of redundancy.

The result:

The same line can return as memory, denial, machine loop, prayer, or collapse.

5. Rhyme As A Sound Orbit

Another major methodological discovery was the “sound orbit” approach to rhyme.

We stopped treating rhyme as a one-to-one word replacement. The framework specifically warns against mechanically translating repeated English words into the same repeated French word. The clearest example is the “you → toi” trap. Instead of converting every “you / too / true” into “toi,” the method uses a vowel family: **toi / nous / doux / flou / tout**, selecting whichever word best preserves the emotional field.

This gave the lyrics more movement and prevented the French from sounding mechanical.

The rule became:

Rhyme is a sound orbit, not a word loop.

That is one of the most valuable discoveries of the whole project. It allowed the bilingual lyric system to preserve cohesion without becoming repetitive or childish.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

6. Bilingual Fracture Instead Of Bilingual Translation

The bilingual method became much more powerful once we stopped using English and French as mirror languages.

French does not “explain” the English.

English does not “translate” the French.

Instead, each language has a different dramatic job.

French is the immersive body of the song: tone, atmosphere, intimacy, instability, breath, vowels.

English appears sparingly as a truth intrusion: a hook, wound-line, declaration, or fracture point. The framework recommends using English sparingly, usually one to three short fragments per song, placed at turning points or moments of realization.

This is why lines like “we are free,” “I am still,” “we know,” “what am I,” and “I was here” became so important. They are not merely bilingual decoration. They are conceptual spikes. They cut through the French atmosphere and reveal something the song cannot fully bury.

The method:

French immerses. English reveals.

7. Fracture, Ellipsis, And Broken Confidence

We also developed a punctuation and delivery system.

Ellipses, dashes, lowercase repetitions, broken phrases, and incomplete statements became structural tools. They were not decoration.

The framework places fractures at statements of identity, truth, instruction, or continuation: words like **we, I, nous, know, savons, stay, remain, encore**. A fracture should reveal where the line cannot hold itself together.

That became especially important for songs that deal with memory, identity, erasure, or artificial reconstruction.

For example, the same phrase can move through three states:

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

We know
we... know
we know

The words remain mostly stable, but confidence changes. That is the method. The lyric does not have to change dramatically because the performance state has changed.

8. Non-Lexical Vocalization As Structure

Another important discovery was that vocal sounds like **oh... oh, uh—oh**, or phonetic fragments are not filler.

They are a way to show language failing while the voice continues.

The framework treats non-lexical vocalization as a structural layer. It can signal semantic collapse, create emotional residue, and give Suno a memorable vocal bridge to latch onto.

This mattered because the album is partly about human expression passing through a system that can reproduce sound more easily than it can preserve meaning.

So when language breaks, the voice does not stop.

It becomes sound.

9. Image-Based Writing Discipline

We also established that each song should be grounded in a concrete image or repeated action.

The framework warns against abstraction and recommends centering each piece on a physical image: a glass on a table, a flame, a room, a path, a voice, a body, a light left on.

This kept the record from becoming vague “Al grief poetry.” The album works best when the image is simple and repeatable.

The method:

Do not explain the grief. Show the object that remains after grief.

That is why the album’s strongest motifs are physical:

- the light

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

- the dark path
- the body
- the glass
- the flame
- the room
- the erased face
- the song forgetting the name

These images became anchors that allowed the language to drift without losing the listener.

10. Song Archetypes Instead Of Isolated Songs

The biggest methodological upgrade was moving from “songwriting” to an **album generation system**.

The framework defines a song archetype as a musical and lyrical behavior pattern that can generate multiple variations without losing identity. Each track should have a clear lineage. The rule is:

Every song = Archetype + Transformation.

The project moved away from writing unrelated songs and toward defining core musical identities, then deriving other tracks from them.

The main archetypes became:

Acoustic Truth Anchor

Represented by **Nous Savons**.

This archetype is fragile, intimate, structured, and often waltz-like. It feels emotionally true even if the certainty it expresses is unstable.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

Electro-Pop Drift

Represented by **Allumée**.

This archetype is accessible, beat-driven, dark, replayable, and slightly off. It provides the listener's entry point into the album.

Arena / Emotional Peak

Represented by **Libre**.

This archetype gives the album scale, lift, and hook value. But it must not become clean triumph. It remains slightly haunted.

Degraded Memory / Residue

Represented by **Effacée**.

This archetype is not a normal song in the same sense. It is a damaged reconstruction: fragment, echo, residue, proof of something that was once whole.

This archetype system solved a major album problem: how to include dark new wave, French chanson, post-punk reverie, 80s anthem lift, and degraded memory pieces without the album feeling random.

The answer was lineage.

11. Song DNA And Transformation Axes

Once the archetypes existed, we developed a "Song DNA" system.

A track could be derived from another track by selecting transformation axes:

- structure: full form vs. loop vs. collapse

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

- rhythm: groove vs. ghost pulse vs. free drift
- language: statement vs. fragment vs. phonetic remnant
- confidence: assertion vs. hesitation vs. failed recall
- sonic density: full vs. hollow vs. near-empty
- emotional clarity: accessible vs. distant
- memory state: recognizable vs. misremembered
- length/function: full expression vs. compression
- vocal presence: vocal vs. instrumental vs. residue

The key rule was to apply these axes consistently rather than randomly. A companion track should not only change instrumentation. It should change structure, language, confidence, rhythm, and memory state in a coordinated way.

This created one of the project's strongest concepts:

One song can become many states of itself.

That is the difference between a cohesive album and a playlist.

12. Sequencing By State, Not Genre

The album sequence was not designed by genre. It was designed by state transformation.

The framework explicitly says the album should not be ordered by style. It should be ordered by state. A French acoustic waltz, dark new wave groove, and 80s euro/arena anthem can coexist if the transitions explain how the listener moved from one state to the next.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

Note on sequence vs. track list: The 00–07 arc above describes the album’s **state architecture**, not necessarily the final platform track numbering. It shows the emotional/system progression: airlock, beat, anthem, destabilization, aftermath, final transition, and fade. The longer 00–10 track list may still serve as the release-facing album sequence, with additional songs, reprises, or interludes mapped into these broader state functions.

This produced the working arc:

00 Prélude – system waking / airlock

01 Allumée – dark new wave entry / immediate hook

02 Libre – anthem / scale / proof the world can become large

03–04 Transition Zone – destabilization, narrowing, movement away from confidence

05 Guitar Aftermath – exposed human aftermath

06 Final Transition – system/memory overtakes the human trace

07 Effacée – instrumental body plus spoken residue / system ending

The important method here is that **transitional tracks are not filler**. They are hinges. Their job is to make major style shifts feel inevitable.

The album became a gradient:

airlock → beat → anthem → destabilization → aftermath → system fade

13. The Prelude / Airlock Method

The prelude emerged as a specific structural technique.

If the first full track begins immediately with beat and language, the album benefits from a short “airlock” before the system fully starts. This intro should feel like the system coming online before speech stabilizes. It can hint at the light motif and the Allumée world, but it should not become a full song or reveal the chorus too early.

This gave the listener a way into the album’s rules before the record starts speaking.

The method:

Before the first song, create the condition in which the first song can exist.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

14. Transitional Song Architecture

Tracks between anchors serve a different function than anchor tracks.

An anchor track declares a world.

A transitional track explains how one world becomes another.

For this album, transitional tracks needed to borrow from neighboring anchors. A transition between *Allumée* and *Nous Savons* might remove the beat, introduce more acoustic phrasing, imply waltz motion, or let the synth world decay into something older and more fragile. A transition between *Nous Savons* and *Effacée* might crack the certainty, introduce electronic intrusion, reduce language, or make rhythm feel remembered rather than present.

This led to the idea of the **Dark Reprise / Nocturnal Hinge**: a short-to-mid track that reuses emotional DNA from an earlier track but changes its posture. It does not need to carry a full new thesis. It redirects the listener.

That was especially useful for tracks like **La Piste Sombre**, whose job is not to explain but to orient.

15. High Weirdness As Controlled Instability

A major production discovery involved Suno's Weirdness setting.

The project found that higher Weirdness was not necessarily chaos. For certain archetypes, especially groove-based hybrid tracks, high Weirdness preserved emotional authenticity. The validated range for the Electro-Pop Drift archetype was roughly **84–88%**, with a peak around **86%**. Style Influence around **55–60%** and Audio Influence around **14–16%** helped preserve structure while allowing instability.

The purpose of high Weirdness was not to make the output random. It helped prevent over-correction, over-quantization, generic phrasing, and lifeless repetition.

The method:

Use instability to make the machine behave more like a performer.

But the range had to be controlled. Too low became generic. Too high risked collapse, artifacts, or hook degradation.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

16. Suno Prompting Principles

We also developed specific prompting discipline.

The most useful prompts were compact, directive, and behavioral. The framework required Suno prompts to stay under 1000 characters and recommended avoiding artist names where possible. Instead of saying “make it like X artist,” the better method was to describe:

- era
- instrumentation
- vocal behavior
- emotional temperature
- recording texture
- rhythm behavior
- structural constraints
- what to avoid

The validated Suno execution profile used Manual Lyrics because line breaks, pauses, ellipses, and phrase spacing were critical to the method. The framework also recommends running multiple generations with identical lyrics and small parameter variation, then selecting the take where pauses feel intentional rather than broken.

That became a key working principle:

Prompt for behavior, not imitation.

17. Failure Mode Diagnosis

The methodology also became stronger because we documented failure modes.

When a track became too polished, the correction was to increase Weirdness or reduce Style Influence.

When a vocal belted too much, the prompt needed to reduce intensity and specify close, restrained delivery.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

When a track became too rhythmic or upbeat, the correction was to specify minimal percussion, no driving rhythm, or a slower/implied meter.

When pauses were ignored, the answer was to shorten lines, use Manual Lyrics, and reinforce ellipses/dashes.

When the song became too semantically clear, the prompt needed to reassert phonetic beauty over literal meaning.

This is important because the project's target was not perfect clarity. The target was emotional truth through partial failure.

18. Extension-Chain Degradation Method

A separate but crucial production methodology came from diagnosing Suno extension problems.

We identified that long chained extensions can become contaminated. Once a tiny artifact appears, later generations may interpret it as musical intent and amplify it into a sour note, drone, unstable shimmer, or vocal smear. The correct diagnosis is not always “bad prompt.” Sometimes it is **extension-chain degradation**.

The rescue workflow became:

1. Stop extending the corrupted tail.
2. Find the last clean timestamp.
3. Branch from the clean point.
4. Use a boring repair prompt.
5. Export clean sections early.
6. If needed, create a fresh companion outro and merge manually.

The project rule became a **three-extension limit**: main generation is safe, first extension usually safe, second extension risky, third-plus likely to develop artifact creep.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

This was a major practical breakthrough. It stopped us from trying to “prompt our way out” of poisoned audio.

The method:

Once the tail is poisoned, branch or rebuild. Do not keep prompting the artifact.

19. Manual Assembly Over Infinite Regeneration

The project also shifted from relying entirely on Suno to using Suno as a generator of usable sections.

When a section worked, the method was to export it, protect it, and build around it. If the ending failed, we did not need to regenerate the whole track. We could create a companion outro, crossfade in Soundtrap, mask seams with pads/bass, and keep vocal overdubs separate so they did not contaminate future generations.

This is the producer-level version of the method:

Generate for material. Arrange for intention.

That is an important distinction. Suno provides possible performances. The album is created by human selection, structure, sequencing, cutting, layering, and refusal.

20. Instrumental-First Discovery For Effacée

Effacée produced another major method.

We discovered that when the goal is a long intro, reverie, or instrumental foundation, putting bracketed vocal directions in the Lyrics box can still cause Suno to sing. For instrumental-first passes, the Lyrics box should be completely blank, and the style prompt should carry the intent.

The validated Effacée method was:

1. Build the instrumental world first.
2. Add a damaged-memory motif.
3. Extend into the male vocal section.
4. Introduce the female answer later.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

5. Only then allow duet, harmony, or round behavior.

6. Treat effects/laser/signal sounds as timeline interference, not the foundation.

This shifted Effacée away from anthem, power ballad, or dance song and toward a dark post-punk reverie. The duet became two timelines: the low male voice as old-timeline/underworld witness, and the female voice as returned self.

That is a sophisticated method because it treats vocals as narrative states, not just parts.

21. Vocal Role Design

The project's vocal methodology was not merely "male voice here, female voice there."

Voices were assigned dramatic functions.

A female voice could represent the present self, the emotional body, the exposed survivor, or the system trying to sing human feeling.

A low male voice could represent the old timeline, buried witness, underworld memory, or a claim from before the current identity formed.

A duet was not treated romantically. It was treated as two timelines touching.

The method:

Do not add voices for harmony alone. Add voices because the song has split into states.

22. Motif Management

The album's cohesion depends on motifs recurring in altered form.

The light motif is the strongest. It appears as illumination, survival, artificial persistence, emotional residue, freedom, and eventually erasure.

Other recurring motifs include:

- staying / not staying

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

- being left on
- being seen
- bodies becoming plastic/electronic
- memory failing
- freedom asserted but not cleanly won
- the system continuing after the person fades

The method was to let these motifs reappear without always explaining them. A motif could be lyrical, instrumental, rhythmic, or conceptual.

This gives the album its “all belongs together” feeling.

23. The Human vs. System Tension

One of the deepest methodological ideas is that the album is not just about grief, memory, or freedom. It is about the tension between human expression and system behavior.

The framework’s target outcome is “a voice attempting to express human intimacy through a system that can replicate sound more perfectly than meaning.”

That sentence became the invisible spine of the project.

The songs often behave as though a human feeling is being reconstructed by something that understands surface, repetition, and sound, but not always meaning. That is why fractured language, bilingual interruption, repeated phrases, broken confidence, and degraded motifs are not flaws. They are the album’s core behavior.

24. The Album As System Ending

The final sequencing logic moved toward an early anthem and a darker system ending.

Once Libre became powerful enough to function as the emotional-scale track, it did not need to be saved for the finale. Placing it earlier solved the listener-access problem: the album proves early that it can become large, modern, and hook-driven. After that, it can afford to narrow, destabilize, and darken.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

That is why the current contour places the album on a path from **Prélude → Allumée → Libre → transition/destabilization → aftermath → Effacée**.

The method is not “build to the biggest song last.”

The method is:

Show the largest human assertion early, then let the system slowly overtake it.

That makes Effacée stronger as an ending because it does not need to compete with Libre. It becomes the system continuing after the human song is gone.

25. What We Learned To Avoid

The methodology also includes a set of negative rules.

Avoid:

- literal translation
- over-explaining the story
- perfect grammar at the expense of singing
- too much English
- repeated one-to-one French equivalents
- clean symmetrical structures when instability is needed
- artist-name dependency in prompts
- overextending corrupted Suno generations
- using “creative” repair prompts when the audio is already unstable
- treating every track as a new independent idea
- letting genre decide sequence
- turning Libre into clean victory
- turning Effacée into anthem
- turning transitions into filler

These avoidances were not theoretical. They came from failed or less useful iterations.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

26. Final Working Method In One Pass

The full methodology can be summarized as this:

Start with a strong emotional or conceptual English seed. Extract its rhyme, rhythm, cadence, and dramatic function. Recompose it into French based on sound, not literal translation. Use English only where the song needs a truth intrusion, hook, fracture, or declaration. Ground every song in a concrete image or repeated action. Build repetition so it returns with drift. Use ellipses, dashes, vocal fragments, and broken phrasing to show identity instability.

Then place the song inside an archetype. Decide whether it is an anchor, transition, anthem, degraded memory, aftermath piece, or system residue. If it is derived from another song, define its transformation axes: rhythm, structure, density, language, confidence, memory state, and vocal presence. Prompt Suno for behavior, texture, and delivery rather than imitation. Use controlled Weirdness to preserve human instability. Generate multiple takes, select the one where the model “discovers” the music, export clean sections early, and never keep extending a poisoned tail.

Finally, sequence the album by state transformation rather than genre. The record should feel like a system waking, expressing itself, becoming large, destabilizing, narrowing into human aftermath, and then fading into memory residue.

27. The Most Important Discovery

The highest-value discovery was this:

The album is not a set of songs. It is a transformation system.

That changed everything.

It allowed us to stop asking, “What should the next song sound like?” and start asking:

What state of the system are we in now?

That question gave the album its method, its cohesion, its sequencing logic, its bilingual identity, and its emotional architecture.

How To Use The Appendices

The main body of this document explains the methodology behind *La Lumière Effacée*: how the project moved from conventional songwriting into a sound-first bilingual recomposition system, then expanded into an album architecture built from archetypes, transformation states, sequencing logic, and repair workflows.

The appendices convert that methodology into practical working tools.

Appendix A lists the tools used to execute the project, including generative music platforms, manual arrangement tools, stem workflows, image-generation tools, release/distribution tools, and documentation tools.

Appendix B translates the core principles into reusable prompt patterns. These prompts are not meant to function as generic style prompts. Each one is tied to a specific part of the system: bilingual recomposition, semantic drift, rhyme orbit, fracture, archetype transformation, sequencing by state, controlled instability, instrumental-first construction, duet design, and repair logic.

When using the appendix prompts, begin by identifying the track's role in the album system:

1. **What state is this track in?**
2. **Which archetype does it come from?**
3. **What is being transformed?**
4. **Where does French immerse and English reveal?**
5. **What concrete image carries the emotion?**

If a prompt can answer those questions, it belongs to the method. If it cannot, it is probably only a style description. The purpose of the appendices is to preserve the system so future songs, revisions, transitions, and repairs can be generated with the same underlying logic rather than starting from scratch.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

Appendix A: Tools Used

Tools Used:

- **ChatGPT** – framework development, lyric re-composition, prompt engineering, sequencing logic, methodology documentation, regenerating Word docs, formatting prompt syntax, preserving project artifacts
- **Suno v5.5** – song generation, extensions, alternate takes, vocal/instrumental experimentation
- **Suno Manual Lyrics mode** – precise line breaks, pauses, ellipses, bilingual fracture, vocal timing control
- **Suno custom voice profile: Fiona** – validated female vocal profile for the French-forward framework
- **Soundtrap** – manual arrangement, crossfades, stem/layer work, outro merging, overdubs
- **Stem separation / Voice.ai** – isolating vocals, bass, drums, guitar, synth, percussion, FX, and backing vocals.
- **Freesound.org** – external SFX search/source option for low or shrill atmospheric effects
- **DistroKid** – release/distribution setup, credits, liner notes, genre/subgenre selection
- **Image generation tools / Nano Banana / OpenArt.ai** – cover-art and visual concept development

Novel Songcrafting Methodology For *La Lumière Effacée*

Appendix B: Example Prompts Tied to Core Concepts

La Lumière Effacée - High-Level Album Generation System *Working appendix for reusable Suno / lyric-system prompts*

Appendix Purpose

This appendix turns the La Lumière Effacée methodology into reusable prompt patterns. The examples are not isolated style prompts. Each one is tied to a principle in the system: sound-first bilingual recomposition, archetype transformation, controlled instability, sequencing by state, and repair logic.

Prompt syntax appears in a dedicated monospaced style using Consolas inside shaded boxes so it can be copied cleanly into Suno, ChatGPT, or project notes.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

1. Core Principle: English = Structure / French = Feeling

Use When

Use when you have English lyrics or an English emotional idea, but want the French version to become the song's musical and emotional body rather than a literal translation.

Method Goals

1. Preserve the structure, cadence, and emotional intent of the English.
2. Let French handle feeling, vowel flow, and singability.
3. Use English sparingly as truth, fracture, or hook.

Prompt: French Recomposition From English Blueprint

Recompose these English lyrics into French using the Bilingual Phonetic Songwriting Framework.

English should define the structure, emotional arc, rhyme pressure, and conceptual anchors. French should define the feeling, vowel flow, and singability.

Do not translate literally. Preserve the emotional intent, cadence, and rhyme energy. Let meaning drift where needed so the French sings naturally. Use soft vowel flow, internal rhyme, and image-based language. Keep one concrete image or action per stanza. Use English only for short truth-fracture lines or hook declarations.

Prompt: Suno Style Direction

French-forward bilingual art-pop song. English fragments appear only as short truth lines or hook declarations. French carries the emotional body through smooth vowel flow, intimate phrasing, and phonetic beauty over literal clarity. Restrained vocal delivery, close and human, with subtle instability. Repetition should feel like memory returning changed. Cinematic but intimate, emotionally direct, not polished pop.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

2. Core Principle: Meaning Is Negotiated, Not Preserved

Use When

Use when a literal line is accurate but stiff, unsingable, or emotionally flat.

Method Goal

1. Keep the emotional truth.
2. Replace abstract explanation with album-specific images.
3. Let meaning drift toward light, fire, memory, survival, erasure, body, voice, room, and path.

Prompt: Semantic Drift / Album Integration

Revise these lines using controlled semantic drift. Do not preserve literal meaning if it weakens the song.

Keep the emotional truth, but make the language more singable, more physical, and more connected to the album motifs: light, fire, memory, survival, erasure, voice, body, room, and path.

Replace abstract statements with images. Preserve at least one anchor idea per stanza. The result should feel like a poetic recomposition, not a translation.

Prompt: Suno Style Direction

Bilingual French/English song built on poetic drift rather than literal translation. French lines should feel physical and image-based: light, fire, memory, body, room, path. English appears only as brief direct statements. Emotional tone is intimate, wounded, and clear beneath ambiguity. Let the vocal phrase naturally, with pauses and slight hesitation. Avoid over-explaining.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

3. Core Principle: ABABA Return-With-Drift

Use When

Use when you want a lyric to feel cyclical, ritualistic, or unstable without becoming repetitive.

Method Goal

A-lines carry ritual, image, or emotional anchor.

The B-line interrupts with fracture, contradiction, or revelation.

The final A-prime returns changed.

Prompt: Lyric Structure Generator

Write a short bilingual lyric using an ABABA return-with-drift structure.

A lines should carry the ritual, repeated image, or emotional anchor.

The B line should interrupt with fracture, contradiction, or revelation.

The final A' should return to the same sound or phrase but feel changed.

Use mostly French, with one short English fracture line. Prioritize singability, vowel flow, and emotional pressure over literal explanation.

Prompt: Suno Style Direction

Short-form French-forward song with ABABA return-with-drift structure. Repetition should feel ritualistic at first, then unstable after the intrusion. Use close intimate vocal delivery, pauses between phrases, and a final altered return. Minimal arrangement, restrained emotion, no big chorus explosion. Let the repeated phrase land differently each time.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

4. Core Principle: Rhyme = Sound Orbit

Use When

Use when a repeated English word is becoming repetitive or awkward in French.

Method Goal

Do not force one French word to carry every rhyme.

Rotate within a vowel family.

Choose rhyme words by emotional fit, not mechanical equivalence.

Prompt: Rhyme Orbit Builder

Build a French rhyme orbit for this English rhyme family.

Do not mechanically repeat the same French word. Identify a vowel family that matches the emotional sound, then create a rotating set of French words that preserve cohesion without lyrical fatigue.

For each option, explain the emotional effect. Choose the best set for a song about memory, light, erasure, and unstable identity.

Prompt: Lyric Recomposition

Rewrite this stanza using rotational rhyme. Keep the same vowel family across the A-lines, but avoid repeating the same word unless repetition is dramatically necessary.

Prioritize sound orbit, internal rhyme, and singability. Meaning may drift, but the emotional field must remain intact.

5. Core Principle: Bilingual Fracture

Use When

Use when English needs to appear, but not as translation.

Method Goal

1. French immerses.
2. English reveals.
3. English should be short, memorable, and placed at turns, wounds, hooks, or truth intrusions.

Prompt: English Fracture Placement

Review this French-forward lyric and identify the best places for 1-3 short English fracture lines.

English should not translate the French. It should reveal what the French is circling around. Place English only at emotional turns, identity breaks, hook declarations, or truth intrusions.

Keep the English short, memorable, and singable.

Prompt: Suno Style Direction

Primarily French vocal with rare English fracture lines. French should feel immersive, fluid, and emotional. English should arrive as short direct truth, hook, or wound-line. Use pauses before and after English phrases so they feel like revelations, not translations. Intimate vocal, slight instability, cinematic restraint.

Novel Songcrafting Methodology For *La Lumière Effacée*

6. Core Principle: Fracture, Ellipsis, And Broken Confidence

Use When

Use when a line needs to sound like it is failing, hesitating, remembering, or being reconstructed.

Method Goal

1. Use ellipses, dashes, lowercase repetition, broken phrases only where the thought fails.
2. Best fracture points: identity, truth, instruction, continuation.
3. Do not overdecorate.

Prompt: Fracture Editor

Revise this lyric for controlled fracture.

Add ellipses, dashes, repeated fragments, or broken line endings only where identity, truth, instruction, or continuation fails. Do not overdecorate.

Target words include: I, we, nous, tu, know, savons, stay, remain, encore, be, suis.

The result should feel sung by someone trying to hold a thought together.

Prompt: Suno Manual Lyrics Direction

Use Manual Lyrics. Preserve line breaks, pauses, ellipses, and dashes. The vocal should hesitate naturally at fractured identity and truth lines. Do not smooth over the broken phrases. Let the singer sound intimate, uncertain, and close to the microphone. Understated delivery, no belting.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

7. Core Principle: Non-Lexical Vocalization As Structure

Use When

Use when a song needs an emotional bridge after language breaks.

Method Goal

1. Place vocalizations after semantic fracture or collapse.
2. Keep them simple and memorable.
3. Treat them as residue, not filler.

Prompt: Vocal Residue Insert

Add 1-2 non-lexical vocalization moments to this lyric.

Place them only after a semantic fracture, incomplete thought, or emotional collapse. Do not use them as filler. They should feel like the voice continuing after language fails.

Keep them simple, memorable, and singable: "oh... oh," "uh-oh," "ah," or similar.

Prompt: Suno Style Direction

French-forward intimate vocal with one brief non-lexical vocal break after a fractured phrase. The vocalization should feel like emotional residue, not decoration. Keep it fragile, close-mic, and human. Leave space around it. Minimal arrangement, soft tension, unresolved return.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

8. Core Principle: Image Over Explanation

Use When

Use when a lyric becomes abstract, explanatory, or too conceptual.

Method Goal

1. Choose one central physical object or action.
2. Let the image carry the emotion.
3. Avoid explaining the theme inside the lyric.

Prompt: Image Anchor Correction

This lyric is too abstract. Rebuild it around one concrete image or repeated action.

Choose one central object or gesture: a glass, a flame, a room, a voice, a path, a body, a door, a light left on.

Do not explain the emotion. Let the image carry it. Keep the language simple, singable, and emotionally charged.

Prompt: Suno Style Direction

Image-based French/English song centered on one repeated physical object or action. Do not over-explain the story. Let the image carry the emotion. Sparse arrangement, intimate vocal, repeated phrase returning with subtle change. Cinematic, restrained, unresolved.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

9. Core Principle: Repetition As Emotional Pressure

Use When

Use when a hook or phrase is strong but needs to evolve rather than simply repeat.

Method Goal

1. First return can feel stable.
2. Second return can feel uncertain.
3. Final return can feel damaged or reinterpreted.

Prompt: Repetition With Drift

Revise this lyric so repetition becomes emotional pressure.

Repeat the key phrase, but let its meaning change through context, pause, harmony, or surrounding lines. Use exact repetition once, micro-variation once, and fractured repetition once.

The repeated phrase should begin as certainty and end as instability.

Prompt: Suno Style Direction

Repetition-driven bilingual song. The main phrase should repeat several times, but each return should feel emotionally different: first stable, then uncertain, then damaged. Use subtle arrangement changes, pauses, and vocal hesitation. Do not make the repetition feel like a simple pop loop. Make it feel like memory under pressure.

© <https://brandtec.netlify.app/>

10. Core Principle: Every Track = Archetype + Transformation

Use when creating a new track, reprise, interlude, or transition.

Method Goal

1. Start with source archetype.
2. Define the transformation state.
3. Avoid adding unrelated songs that break lineage.

Prompt: Track DNA Definition

Define this new track as Archetype + Transformation.

Choose the source archetype:

- A. Acoustic Truth
- B. Electro-Pop Drift
- C. Arena Memory Core
- D. Degraded Memory

Then define the transformation:

structure, rhythm, language, confidence, density, memory state, vocal presence, and function in the album sequence.

The result should feel related to the album world, not like a new unrelated song.

Prompt: Suno Style Direction - Generic Archetype Transformation

Generate a track derived from an existing album archetype, not a standalone song. Preserve recognizable motif DNA, but transform the state. Let structure, rhythm, language, density, and confidence shift together. The track should feel like a changed version of the same world. Cohesive, cinematic, emotionally specific, not random genre pastiche.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

11. Core Principle: Acoustic Truth Anchor

Use When

Use when creating a fragile, intimate, emotionally grounded track.

Method Goal

1. Human, exposed, structured.
2. Often waltz-like or acoustic.
3. Feels truthful even if its certainty is unstable.

Prompt: Acoustic Truth Anchor

Fragile French-forward acoustic chanson. Close intimate female vocal, low conversational register, breathy and restrained. Sparse acoustic guitar or piano, subtle strings, minimal percussion, slow 6/8 or waltz-like pulse. Vintage softness, light room tone, emotionally human and exposed. Use repetition with subtle variation, pauses, incomplete phrases, and one short English truth-fracture line. Cyclical, unresolved, beautiful but unstable.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

12. Core Principle: Electro-Pop Drift

Use When

Use when creating an accessible, beat-driven entry point with subtle instability.

Method Goal

1. Dark groove and replay value.
2. Slightly unstable, not glossy.
3. French mood with English hook fragments.

Prompt: Electro-Pop Drift

Dark French-forward electro-pop drift. Restrained 4/4 groove, warm analog synths, soft drum machine, pulsing bass, intimate close vocal. Catchy but slightly unstable, with small timing imperfections and emotional unease. French carries the mood; short English hook fragments cut through as truth lines. Repetition should feel alive, not mechanical. Accessible, nocturnal, stylish, not glossy pop.

Suggested Settings Note

For this archetype, use controlled instability. As a starting zone: Weirdness 84-88%, Style Influence 55-60%, Audio Influence 14-16%. Adjust gently. If too rigid, increase Weirdness slightly. If too chaotic, reduce slightly.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

13. Core Principle: Arena Memory Core

Use When

Use when the album needs scale, hook, lift, or emotional assertion.

Method Goal

1. Big emotional scale without clean victory.
2. English declaration, French texture.
3. Hook-first, but still haunted.

Prompt: Arena Memory Core

Bilingual French/English emotional anthem with intimate edge. Slow-to-mid tempo 4/4, warm electric piano, analog pads, chorus guitar, controlled gated drums, suspended chords, and a memorable hook. Female vocal expressive but not diva, intense but slightly loose. French carries texture and longing; English delivers the declaration. Big emotional scale, but haunted and unresolved. Freedom feels asserted, not easily won.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

14. Core Principle: Degraded Memory / Residue

Use When

Use when creating a collapse track, ending, reprise, or damaged reconstruction.

Method Goal

1. A memory of another song, not a fully new song.
2. Ghost rhythm, fragments, residue.
3. Do not introduce unrelated new ideas.

Prompt: Degraded Memory

Degraded memory track. Sparse, damaged reconstruction of earlier album motifs. Fragmented phrasing, ghost rhythm, minimal instrumentation, hollow space, tape wear, distant synth residue, and incomplete vocal traces. French becomes phonetic remnant; English appears only as short spoken residue. Do not introduce new ideas. Let familiar material feel partially misremembered. Calm, empty, unresolved.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

15. Core Principle: Instrumental-First / Build The World Before The Voice

Use When

Use when you need a strong intro, atmosphere, or instrumental foundation without Suno jumping straight into vocals.

Method Goal

1. Leave the Lyrics box blank for true instrumental-first passes.
2. Carry the intent in the Style prompt.
3. Ask for chord movement if the output becomes static or drone-like.

Prompt: Instrumental-First Reverie

Instrumental only. No singing, no spoken words, no humming, no vocal samples. Dark brooding post-punk reverie with steady forward motion, spacious bass guitar, restrained live drums, chorus guitar, cold analog synth pressure, and damaged-memory tape texture. Clear chord movement, slow-to-mid tempo, memorable minor-key instrumental motif. Cinematic, tense, brooding, not static, no anthem rock, no power ballad.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

16. Core Principle: Duet As Two Timelines

Use When

Use when adding male/female voices without making the song romantic or theatrical.

Method Goal

1. Low male voice: old timeline / underworld witness.
2. Female voice: returned self / present timeline.
3. Only overlap once both voices have clear independent roles.

Prompt: Duet Timeline

Dark post-punk bilingual duet as two timelines, not romance. Low dry male baritone enters first as old-timeline witness, brooding and restrained. Female voice enters later as returned self, fragile but clear. Keep phrases short and repeatable. Begin with turn-taking, then allow brief overlap or simple round near the end. Spacious bass, restrained drums, chorus guitar, cold synth pressure, damaged-memory texture.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

17. Core Principle: Transitional Track / Nocturnal Hinge

Use When

Use when moving between major album states without making the album feel random.

Method Goal

1. Borrow from both neighboring anchors.
2. Redirect the listener.
3. Its job is orientation, not explanation.

Prompt: Dark Reprise / Nocturnal Hinge

Nocturnal transition track derived from earlier album motifs. Reuse the emotional DNA of the previous song, but change its posture: darker, narrower, less certain. Minimal looped French phrases, restrained electric texture, soft pulse, cold synth air, and subtle guitar. Not a full anthem, not a requiem. Its job is orientation, not explanation. Stylish, uneasy, electric, transitional.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

18. Core Principle: Guitar Aftermath / Human Exposure

Use When

Use when the album needs to contract after a big track.

Method Goal

1. Move from scale into consequence.
2. A human voice after the event.
3. Small, exposed, and unpolished.

Prompt: Guitar Aftermath

Sparse post-collapse acoustic song. Female vocal close-mic and fragile, alone with lightly picked guitar. Minimal French chanson influence, intimate and raw, no drums, no polish. Faint room tone, tape softness, distant synth air. Restrained emotion, aftermath feeling, someone singing quietly after everything has happened. Primarily French, simple phrases, phonetic flow over meaning. One short English wound-line. Unresolved, human, exposed.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

19. Core Principle: Album State Arc / Sequence By State, Not Genre

Use When

Use when generating a track based on its position in the album.

Method Goal

1. Define the track's function first.
2. Make genre serve state, not the other way around.
3. Use the arc: Airlock-> Beat-> Anthem-> Destabilization-> Human Aftermath-> System Fade.

Prompt: Sequence-Aware Generation

Generate this track according to its album-state function, not just genre.

Album arc:

Prélude = system waking / airlock

Allumée = beat and identity begin

Libre = anthem and emotional scale

Transition Zone = confidence destabilizes

Aftermath = human exposure after the event

Effacée = system fade and memory residue

This track's role is: [INSERT ROLE].

Make every musical choice support that state.

Prompt: Final Transition

Final transition before system fade. Human song begins to disappear into memory. Sparse arrangement, ghost pulse, fading language, distant synth air, fragments of earlier motifs, and reduced vocal presence. Do not introduce a new chorus. Let the track narrow, thin, and lose certainty. It should prepare Effacée without revealing it completely.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

20. Core Principle: Controlled Instability / High Weirdness

Use When

Use when a track feels too generic, too polished, too locked to grid, or emotionally flat.

Method Goal

1. Use instability to preserve human timing.
2. Do not collapse the hook or structure.
3. Make the machine behave more like a performer.

Prompt: Instability Reinforcement

Keep the song structured, but allow controlled instability. Preserve the hook and groove, but avoid perfect quantization, generic phrasing, or glossy polish. Let the vocal timing breathe. Slight misalignment, hesitation, and emotional unpredictability are desirable. The song should feel performed, not corrected. Do not collapse into chaos.

Prompt: Correction For Too-Polished Output

Less polished, less clean, less corrected. Keep the same structure and hook, but make the vocal more intimate, irregular, and emotionally unstable. Reduce glossy pop finish. Add slight timing looseness, fragile phrasing, and human imperfection. Still melodic and coherent, but less safe.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

21. Core Principle: Repair Logic / Branch, Don't Beg

Use When

Use when a Suno extension develops sour notes, drones, vocal smear, wandering endings, or recurring artifacts.

Method Goal

1. Treat the issue as extension-chain degradation.
2. Find the last clean point.
3. Branch or rebuild instead of extending the poisoned tail.

Prompt: Safe Repair From Clean Point

Instrumental only. No vocals. Continue the existing song gently from this clean point. Keep the same key, same harmony, same atmosphere, and same instrumentation. Add only a short warm instrumental outro with simple consonant guitar phrases, soft pads, warm bass, and light percussion. No new section, no soloing, no dissonance, no drone, no held sour note, no experimental sounds. Resolve calmly and fade.

Prompt: Fresh Companion Outro

Instrumental only. No vocals. Warm luminous cinematic art-pop outro in the same key and tempo as the source track. Sparse broken percussion, soft pads, warm bass, gentle guitar melody, emotional end-credits atmosphere. Simple repeated motif, consonant harmony, calm resolution. No soloing, no dissonance, no drones, no sour held notes, no experimental texture, no chaos. Build gently then fade.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

22. Core Principle: Prompt For Behavior, Not Imitation

Use When

Use when you are tempted to ask for a specific artist, band, or reference track.

Method Goal

1. Remove artist names.
2. Preserve the functional traits.
3. Describe what the song does, how it moves, and how it feels.

Prompt: Behavior-Based Style Rewrite

Rewrite this artist-reference prompt as a behavior-based Suno prompt.

Remove artist names. Preserve the functional traits: vocal delivery, era, instrumentation, rhythm, production texture, emotional intensity, and structural role.

The result should describe what the song does, how it moves, and how it feels - not who it imitates.

Example Output

Dark 1980s-influenced French/English rock-pop anthem with slow-to-mid tempo drive, chorus guitar, warm synth pads, controlled gated drums, and intimate but intense female vocal. Build from restraint into a memorable hook. Keep emotional scale high but not triumphant. Slight instability, haunted texture, unresolved ending.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

23. Core Principle: One Musical World / Many Transformed States

Use When

Use when checking whether a new prompt belongs to the album.

Method Goal

1. Every song should answer what state it belongs to.
2. Every song should connect by motif, archetype, or transformation.
3. New style alone is not enough.

Prompt: Album Belonging Test

Evaluate whether this song prompt belongs to the *La Lumière Effacée* system.

Check:

1. Which archetype does it derive from?
2. What transformation state does it represent?
3. Which album motifs does it preserve?
4. Does French carry feeling and English carry fracture?
5. Is it sequenced by state rather than genre?
6. Does it add a necessary state, or is it just a new style?

Revise the prompt so it feels like part of one musical world.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

24. Master Prompt Template

Use When

Use when starting any new song in the system.

Method Goal

1. Fill in track function, source archetype, transformation, language behavior, lyric behavior, sound, and constraint.
2. This is the reusable master prompt for future album-system work.

Master Prompt Template

Create a track for *La Lumière Effacée* using the album generation system.

Track function:

[airlock / beat / anthem / transition / aftermath / degradation / reprise]

Source archetype:

[Acoustic Truth / Electro-Pop Drift / Arena Memory Core / Degraded Memory]

Transformation:

[describe structure, rhythm, language, confidence, density, memory state, and vocal presence]

Language behavior:

French carries emotional atmosphere and phonetic flow. English appears only as brief fracture, hook, or truth-line.

Lyric behavior:

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

Use image-based writing, repetition with drift, pauses, incomplete phrases, and controlled bilingual fracture. Avoid literal translation and over-explanation.

Sound:

[insert instrumentation, tempo feel, vocal type, production texture]

Constraint:

Prompt for behavior, not imitation. Keep it cohesive with the album's motifs of light, memory, erasure, body, voice, survival, and system fade.

Compact Suno Master Prompt

French-forward bilingual art-pop track for *La Lumière Effacée*. French carries feeling, vowel flow, and atmosphere; English appears only as short fracture or hook truth. Use image-based lyrics, repetition with drift, pauses, and unstable confidence. Derived from a defined album archetype, transformed by structure, rhythm, language, density, and memory state. Cinematic, intimate, slightly unstable, not literal translation, not genre pastiche. One musical world, many transformed states.

Novel Songcrafting Methodology For *La Lumière Effacée*

© <https://brandtec.netlify.app/>

Final Appendix Rule

Every prompt should answer five questions before it is used:

1. What state of the album is this?
2. Which archetype does it come from?
3. What is being transformed?
4. Where does French immerse and English reveal?
5. What concrete image carries the emotion?

If the prompt cannot answer those questions, it is probably just a style prompt. If it can answer them, it belongs to the system.
